CUMITECHS
Cumulative Techniques and Procedures in Clinical Microbiology

Editorial Board: Steven C. Specter (Chairman), Carl Abramson, Ellen Jo Baron, Mary J. R. Gilchrist, William J. Martone, John E. McGowan, Jr., Frederick S. Nolte, Arne C. Rodloff, James W. Smith, John A. Smith, Thomas J. Tinghitella, and Alice S. Weissfeld

Cumitechs (Cumulative Techniques and Procedures in Clinical Microbiology) are consensus reports in booklet form on topics of special interest to the clinical microbiology laboratory. They represent expert opinion on optimal procedures for a variety of clinical microbiology techniques. Easily stored in the special binder available from ASM, Cumitechs are authoritative, brief, practical—and eminently useful in the clinical laboratory setting. The following Cumitechs are currently available:

26. Laboratory Diagnosis of Viral Infections Producing Enteritis
25. Current Concepts and Approaches to Antimicrobial Agent Susceptibility Testing
24. Rapid Detection of Viruses by Immunofluorescence
23. Infections of the Skin and Subcutaneous Tissues
22. Immunoserology of Staphylococcal Disease
21. Laboratory Diagnosis of Viral Respiratory Disease
20. Therapeutic Drug Monitoring: Antimicrobial Agents
19. Laboratory Diagnosis of Chlamydial and Mycoplasmal Infections
18. Laboratory Diagnosis of Hepatitis Viruses
16. Laboratory Diagnosis of the Mycobacteriases
15. Laboratory Diagnosis of Viral Infections
14. Laboratory Diagnosis of Central Nervous System Infections
11. Practical Methods for Culture and Identification of Fungi in the Clinical Microbiology Laboratory
10. Laboratory Diagnosis of Upper Respiratory Tract Infections
9. Collection and Processing of Bacteriological Specimens
8. Detection of Microbial Antigens by Counterimmunoelectrophoresis
7A. Laboratory Diagnosis of Lower Respiratory Tract Infections
6A. New Developments in Antimicrobial Agent Susceptibility Testing: a Practical Guide
4. Laboratory Diagnosis of Gonorrhea
3A. Quality Control and Quality Assurance Practices in Clinical Microbiology
2A. Laboratory Diagnosis of Urinary Tract Infections
1A. Blood Cultures II

ORDERING INFORMATION:

Subscriptions: Approximately four Cumitechs are published per year, on an irregular schedule. Subscribers are mailed all new Cumitechs and are invoiced at $6.00 per issue.

Individual orders: Member, $6.00 each; nonmember, $7.00 each. Limit of three of one title at the member rate.

Quantity discounts: 11.50 of the same Cumitech, $5.00 each; 51-250, $3.50; 251-1,000, $2.50; 1,001 and over, $2.00.

Also available: Three-ring vinyl binder for ASM Cumitechs, $9.00.

PAYMENT TERMS: All orders except subscriptions must be prepaid in U.S. dollars drawn on a U.S. bank or charged to MasterCard, Visa, American Express, or Eurocard. Subscribers are invoiced after publication of each issue. Charge card orders can also be placed by phone (202-737-3600) or fax (202-737-0368). Prices are subject to change without notice. ASM pays all postage and handling costs for Cumitechs.

Send me the Cumitechs I have listed below.

Publication Sales
American Society for Microbiology
1325 Massachusetts Ave., N.W.
Washington, DC 20005-4171
Through a joint venture of the American Society for Microbiology and The William Byrd Press, selected ASM journals are now available on CD-ROM (Compact Disc-Read Only Memory).

Unlike other CD-ROM products, Byrd Electronic Publications for ASM include both the full text of the journal as well as high-resolution images of the original pages in which text and graphics are fully integrated. Everything on the original pages appears on your monitor, in place — from the table of contents to the indexes, charts, graphs, and photographs.

Using Byrd's retrieval software, you can conduct full word searches through thousands of pages to instantly find any search term, and then "turn" to the exact pages where the term occurred. Or, you can browse through a journal or book on screen just as you would with the printed publication in your hands. You can retrieve, display and print the page image on a laser printer or output ASCII text to a floppy disk or dot matrix printer.

Byrd's proprietary retrieval software was specifically designed for users of scientific publications. It gives you the flexible search functions you need to fully and quickly explore a unique publication database.

A growing number of ASM titles will be available on CD-ROM at affordable prices.

Current Titles
Available in three-year sets of a single journal, usually three discs per set. Volumes in the set are 1989-1991. Volumes 1989 and 1990 will be shipped immediately after receipt of an order; 1991 will be shipped in late December. Prices range from $229-$269 for the three-year set with special offers available if you purchase multiple journals.

Antimicrobial Agents and Chemotherapy
Applied and Environmental Microbiology
Infection and Immunity
Journal of Bacteriology
Journal of Clinical Microbiology
Journal of Virology
Molecular and Cellular Biology

Computer Systems Specifications
- IBM-compatible 286/386 personal computer
- High-resolution graphics monitor (VGA)
- CD-ROM drive
- User-friendly Byrd retrieval software
- Laser printer (optional) to print page images, including graphs, charts and photos
- Dot matrix printer to print text only

For technical support there is a toll-free number. Consultation available for hardware selection.

Now, Flu A. Stat.

It's easy to perform. Offers proven accuracy. And it's STAT. Announcing Directigen® Flu A—the first stat test for detection of antigen to Influenza Type A.

An EIA test performed on nasopharyngeal aspirates, washes or swabs, Directigen Flu A, gives you clear, stable results in less than 15 minutes, with 91% sensitivity and 95% specificity.¹²

So now your lab can confidently support critical antiviral therapy recommendations, track influenza A epidemics, or direct prophylaxis—without waiting hours or days for results.

You can store all components of Directigen Flu A at room temperature, so it's available around-the-clock. Plus, the simple procedure saves valuable tech time.

This flu season, make your laboratory's Influenza A detection STAT. Order Directigen Flu A today from your Becton Dickinson Microbiology Systems distributor.

Becton Dickinson Microbiology Systems
P.O. Box 243
Cockeysville, MD 21030
800-638-8663

And—for STAT detection of respiratory syncytial virus, use Directigen® RSV. Now available in 20- and 40-determinations Kits.

¹Data on file, Becton Dickinson Microbiology Systems.
Ortho continues to explore new ways to protect the blood supply and diagnose infectious diseases. In AIDS screening, for example, we rank among the first to have made an HIV-1 test widely available.

In the area of hepatitis, our breakthrough HCV assay detects a form of viral hepatitis—undetectable, until now. As a result, transfusions are safer, sparing hundreds of patients a week from the threat of posttransfusion hepatitis and significant medical expenses.

In other areas of infectious diseases, our Microwell Test System meets the demands for efficiency in the high-volume lab with unified, easily automated technology. Add to this our technical support, training and field service programs—and you have the Ortho commitment to infectious disease testing.

Ortho territory. Where possibilities are explored and innovations realized.

LABORATORY SUPERVISORS

Supervisors: Clinical Microbiology and Clinical Virology Laboratories. Both positions include organization and supervision of laboratories in response to patient care needs and clinical research activities of the Program in Infectious Diseases. Minimum qualifications include a baccalaureate degree in medical technology or an allied health field and (5) years of experience in relevant areas, or masters degree in medical technology or related field. Previous supervisory/management experience is desirable. Starting salary DOE + excellent benefits and a smoke-free environment. Child care available. Please send resume to:

FRED HUTCHINSON CANCER RESEARCH CENTER
Human Resources Office #DS-2741
1124 Columbia Street
Seattle, WA 98104
An Equal Opportunity Employer

PUT YOUR EXPERIENCE TO WORK FOR YOU

You have your doctorate degree and are actively involved in the practice of medical and public health microbiology, virology, mycology, parasitology or clinical immunology. Now you can gain the professional recognition you deserve from your medical and scientific colleagues.

The American Academy of Microbiology offers board certification through the American Board of Medical Microbiology or the American Board of Medical Laboratory Immunology. Diplomates certified by ABMM or ABMLI are recognized for their skills by their peers as well as by government agencies. At the present time the federal government and many states recognize ABMM and ABMLI certification in clinical laboratory licensure requirements.

Infections Associated with Indwelling Medical Devices

Edited by Alan L. Bisno
Miami VA Medical Center and University of Miami School of Medicine, Miami, Florida, and Francis A. Walldvogel
University Hospital, Geneva, Switzerland

Indwelling prosthetic devices have become a common and indispensable part of modern medical care. Examples include intravenous and intra-arterial catheters, heart valves, vascular bypass grafts, implanted ocular lenses, central nervous system shunts, artificial hips, peritoneal dialysis catheters, and intrauterine devices.

Infection is the main complication associated with these devices. Such infections often cause the devices to malfunction, leading to their removal. Depending on the location and function of an implanted device, infections can lead to illness and even death.

This volume reviews the latest that is known about infections associated with indwelling medical devices. It will be of great interest to clinicians, infectious-disease specialists, surgeons and physicians who insert prosthetic devices or care for the millions of people who are exposed to the risk of device-related infections, and biomedical scientists studying host-parasite interactions.

CONTENTS
1. Host Factors Predisposing to Foreign Body Infections (Vaudaux et al.)
2. Microbial and Foreign Body Factors in the Pathogenesis of Medical Device Infections (Christensen et al.)
3. Immunomodulating Properties of Extracellular Slime Substance (Peters et al.)
4. Ocular Infections (Baker and Schein)
5. Infections of Central Nervous System Shunts (Bisno)
6. Infected Orthopedic Prostheses (Brause)
7. Infections of Prosthetic Heart Valves and Vascular Grafts (Karchmer and Bisno)
8. Pathogenesis, Prevention, and Management of Infections Due to Intravascular Devices Used for Infusion Therapy (Maki)
9. Infections Associated with Endotracheal Intubation and Tracheostomy (Vallandigham and Johanson)
10. Infections Associated with Foreign Bodies in the Urinary Tract (Hessen and Kaye)
11. Infections Associated with Peritoneal and Hemodialysis (Vas)
12. Infections of the Female Genital Tract (Chesney)
13. Antimicrobial Prophylaxis of Infections Associated with Foreign Bodies (Kaiser)

Hardcover (ISBN 1-55581-008-X)

CERTIFIABLY SUPERIOR.

InocuLoop™ WITH FREE SIZING GAUGE.

Until now, there has been no sure, easy way of validating disposable inoculating loop calibration.

The Evans Blue Dye method requires lengthy preparation of solutions followed by spectrophotometric comparison of loop volume against a standard curve.

The gravimetric method is based on the principle that the amount a loop transfers can be determined gravimetrically by using an analytical balance. At Evergreen we made extensive use of this method to help us determine the shape and size of the inoculating loops we make, using random urine samples.

However, we do not believe that many microbiology labs will have the time or inclination to validate loop calibration using either of the above methods.

Recently, the FDA drill bit method for calibrating loops was adapted into a metal GO-NO GO gauge. This development represents a giant step forward. This method has since been accepted by the United States Public Health Service.

Evergreen’s research in this area has culminated in a gauge called the “CALOOPBRATOR™.” This gauge goes one important step further than the metal GO-NO GO gauge. Simply put, the CALOOPBRATOR™ is a double duty GO-NO GO gauge precision molded into one accurate device. By using the CALOOPBRATOR™, one can check the acceptable inside diameter of the loop as well as the acceptable thickness of the loop in less than one minute. Perhaps the best feature of all about the CALOOPBRATOR™ is that you don’t ever have to buy it. It comes free with every case of InocuLoop brand inoculating loops available only from Evergreen and its distributors.

Advantage: Evergreen
For further information, please write or call:

EVERGREEN SCIENTIFIC
2300 EAST 49TH STREET
LOS ANGELES, CA 90058-0248
(213) 583-1331

*Patents pending.

First, use the CALOOPBRATOR™ end gauge to check the inside diameter of the INOCU LOOP™. The GO end gauge (green) should pass through and the NO GO end (red) should not. Then hold the CALOOPBRATOR™ flat and pass the INOCU LOOP™ through the slot at a right angle to check for thickness. The loop should pass through the GO slot smoothly (green end), but not through the NO GO slot (red end). If both the GO tests are met, the loop is in calibration.
Manual of Clinical Laboratory Immunology
Third Edition

Editors: Noel R. Rose, Herman Friedman, and John L. Fahey

The rapid growth of immunological methodology in the last five years has led to an increased need for a current, thorough, and reliable instruction manual for laboratory personnel to consult.

ASM’s Manual of Clinical Laboratory Immunology (3rd ed.), published in 1986, has become the standard among such works. The latest edition of this highly useful reference has been completely revised and updated.

The Manual’s main purpose is to outline laboratory tests, rather than procedures done with patients by physicians. Methodologies are presented in a manner understandable to students and laboratory workers.

Written by more than 240 of the leading authorities in the field, the Manual offers not only concise descriptions of almost every laboratory test in current use, but much new material in all sections, plus new editors for some sections and two entirely new sections reflecting the growing trends in the field.

New sections:
- lymphocyte enumeration
- immunopathology and immunohistology

New section editors for:
- immunoglobulins and B-cell disorders
- complement and immune complexes
- bacterial, mycotic, and parasitic immunology
- viral, rickettsial, and chlamydial immunology
- immunohematology
- allergy
- immunodeficiency
- tumor immunology

New material:
- general methodology
- immunoassay
- cellular components
- autoimmune diseases
- immunogenetics and transplantation immunology
- laboratory management and administration

Order your copy of this essential reference work today.

A comprehensive examination of an exciting new family of drugs

Quinolone Antimicrobial Agents

Edited by John S. Wolfson and David C. Hooper
Massachusetts General Hospital, Boston

From general information to data on applications for specific bacterial infections, Quinolone Antimicrobial Agents brings together in a concise volume a critical and comprehensive account of existing information on these new synthetic drugs.

In general, the high expectations for these drugs by researchers have been borne out by clinical studies published in the past several years. Quinolones are being hailed for their more potent in vitro effects, broader antibacterial spectrum, relatively long half-life in serum, excellent tissue penetration, and permeation into human cells, resulting in antimicrobial activity against intracellular pathogens.

Physicians—especially infectious-disease specialists, clinical microbiologists, pharmacologists and pharmacists, and basic microbiologists and molecular biologists will all find the contents helpful and informative.

Contents

1. Introduction (Wolfson and Hooper)
4. Pharmacokinetics of Quinolone Antimicrobial Agents (Drusano)
5. Treatment of Urinary Tract Infections with Quinolone Antimicrobial Agents (Norrby)
6. Treatment of Sexually Transmitted Diseases with Quinolone Antimicrobial Agents (Dallabetta and Hook)
7. Treatment of Respiratory Tract Infections with Quinolone Antimicrobial Agents (Scully)
8. Quinolone Antimicrobial Agents in the Management of Bacterial Enteric Infections (DuPont)
9. Treatment of Osteomyelitis and Septic Arthritis with Quinolone Antimicrobial Agents (Waldvogel)
10. Use of Quinolone Antimicrobial Agents in Immunocompromised Patients (Winston)
11. Treatment of Experimental and Human Bacterial Endocarditis and Meningitis with Quinolone Antimicrobial Agents (Bayer)
12. Treatment of Skin and Soft Tissue Infections with Quinolone Antimicrobial Agents (Hooper and Wolfson)
13. Quinolone Antimicrobial Agents and Ophthalmologic Infections (Wolfson and Hooper)
14. Adverse Effects of Quinolone Antimicrobial Agents (Hooper and Wolfson)
15. Quinolone Antimicrobial Agents: Overview and Conclusions (Moellinger)

In two volumes, the current "last word" on bacterial nomenclature from *Acetobacter* to *Zymomonas* …

**APPROVED LISTS OF BACTERIAL NAMES**

(Amended Edition)

V. B. D. Skerman, Vicki McGowan, and P. H. A. Sneath

**INDEX OF THE BACTERIAL AND YEAST NOMENCLATURAL CHANGES**

Published in the *International Journal of Systematic Bacteriology* since the 1980 Approved Lists of Bacterial Names (1 January 1980 to 1 January 1989)

W. E. C. Moore and Lillian V. H. Moore

Originally published in 1980 in the *International Journal of Systematic Bacteriology*, the Approved Lists of Bacterial Names includes all valid names of bacteria which, through 1979, had been adequately described and, if cultivable, for which there was a type, neotype, or reference strain available. It has been reproduced in hardcover with minor corrections and a more "user friendly" format. The *Index of the Bacterial and Yeast Nomenclatural Changes* is a new softcover adjunct volume to the Approved Lists, which provides a complete and orderly compilation of nomenclatural changes that have occurred from 1 January 1980 through 1 January 1989. These complementary volumes are not sold separately; they are available only as a set.

Every reference collection serving the life sciences should include this set.

December 1989.
Hardcover (ISBN 1-55581-014-4), 200 pages; plus softcover, 72 pages
Price per set: Member, $40.00; Nonmember, $55.00

Only one
C. difficile test
offers this important
plus.

Introducing
Cytocline
A+B EIA.
The first assay
that detects
Toxin A and
Toxin B.

Utilizing the Toxin B monoclonal
antibody that was cloned and patented by
Cambridge Biotech, Cytocline A+B EIA
is the industry's only test that detects both
toxins associated with C. difficile. It offers
accuracy comparable to the 48-hour cyto-
toxic assays, and speed that rivals the Toxin A tests now on the market.

Fact is, in clinical trials: Cytocline A+B EIA detected 99% of confirmed cytotoxin-
positive samples—in just 3 hours. And with Cytocline A+B EIA, you get a true
positive or negative reading. So you virtually never have to confirm results with a
cytotoxin assay.

Cytocline A+B EIA. It’s the only C. difficile test that gets all “A’s and B’s.”

To learn more, call us at 1-800-637-8376 (1-800-439-5776 in Massachusetts).
Or write to: Cambridge Biotech, 365 Plantation Street, Worcester,
MA 01605.

Announcing the latest edition of the “clinical microbiologist’s bible”

MANUAL OF CLINICAL MICROBIOLOGY
FIFTH EDITION

Edited by Albert Balows (Editor in Chief), Emory University School of Medicine, Atlanta, Georgia; William J. Hausler, Jr., University of Iowa Hygienic Laboratory, Iowa City; Kenneth L. Herrmann, Centers for Disease Control, Atlanta, Georgia; Henry D. Isenberg, Long Island Jewish Medical Center, Long Island Campus for Albert Einstein College of Medicine, New Hyde Park, New York; and H. Jean Shadomy, Virginia Commonwealth University, Richmond

The latest edition of ASM’s renowned guide for the clinical laboratory will be off the presses and ready for shipment in Spring 1991. The Manual of Clinical Microbiology, Fifth Edition, has been completely revised and reorganized and expanded by over 200 pages to keep pace with new developments and technologies. Like the previous editions, this volume is sure to become the “must have” reference for clinical microbiologists, infectious disease specialists, pathologists, medical technologists, clinicians, and students and educators who have a special interest in clinical and diagnostic microbiology, public laboratory procedures, and epidemiology.

Nearly 200 contributors, including leading clinical microbiologists, laboratory directors, and clinical researchers from throughout the world, have given generously of their time and expertise to achieve a compilation of clinical information that is consistent, reliable, and completely relevant to the varying needs of the great diversity of modern labs providing clinical microbiology services.

Physically, this is a very high-quality book. The fifth edition has been carefully bound in a handsome silver and red cover. Once again, the Manual is printed in large format on fine paper stock and is shipped in a sturdy, reinforced carton.

Organizationally, the ten sections, summarized below, fall into three major groups: (i) organizational and operational sections, containing chapters that address general diagnostic technologies, nosocomial and community infections, and the fundamentals of day-to-day laboratory operation—such topics as how to collect and safely manage specimens and the best method to distinguish between similar isolates; (ii) sections dealing with specific microorganisms, how they are isolated and identified, and their significance; and (iii) sections on the selection of antimicrobial agents, tests to define the mode of antibiotic action or mechanisms of resistance, and assays for detecting antimicrobial agents in blood and other body fluids.

CONDENSED CONTENTS

I. General Issues in Clinical Microbiology (7 chapters) •
II. Diagnostic Technologies in Clinical Microbiology (12 chapters) •
III. Nosocomial and Community Infections: the Role of the Clinical Microbiology Laboratory (6 chapters) • IV. Bacteria (31 chapters) •
V. Fungi (9 chapters) • VI. Parasites (7 chapters) • VII. Viruses (30 chapters) • VIII. Rickettsiae and Chlamydiae (4 chapters) •
IX. Antimicrobial Agents and Susceptibility Tests (3 chapters) •
X. Quality Control, Media, Reagents, and Stains (3 chapters)

When ordering, specify offer number below. All orders must be prepaid in U.S. dollars or charged to a card listed below. Members are limited to three copies at the member price. Charge card orders may also be placed by telephone (202-737-3600) or by fax (202-737-0368).

Please rush me the new Manual of Clinical Microbiology (offer number JCM 10/91-029-2).

Directigen 1-2-3
Satisfaction Coast to Coast.

Last strep season, we challenged laboratories across the country to see how Directigen 1-2-3 delivered the fastest, easiest and most dependable Group A Strep results around.

Frankly, the response astonished us. From major hospitals to medical centers, from clinics to health departments, testimonials poured in:

"The simplicity of the procedure as well as the long shelf life makes it the ideal rapid Group A Streptococcus screen for any laboratory."

Mvra Pettis, MT (ASCP), Bayfront Medical Center, St. Petersburg, FL

"It is frequently ordered by the physicians in our Emergency Room...We enjoy the fact that Directigen 1-2-3 is so easy to perform."

Claudia Onken, MT, Kent General Hospital, Dover, DE

"The extended shelf-life with room temperature storage makes it quick and convenient. We have tried other Strep ID systems and found none which satisfies our needs like Directigen 1-2-3."

Thomas P. McCue, R.P.S., Lab Dir., Fort Wayne-Allen County Board of Public Health, Fort Wayne, IN

"We love our Directigen 1-2-3. The best part is that you don't have to refrigerate the kit, so there is no time wasted letting reagents come to room temperature...Great Product!"

Debi Morris, MT, Paulding Memorial Medical Center, Dallas, GA

"Directigen 1-2-3 has done wonders for streamlining testing on our pharyngitis patients...Additionally, appropriate therapy can be implemented sooner and with greater confidence."

Ricky D. Burkman, MT (AMT), Ancillary Dir.-Laboratory, F.A.Bell Memorial Hospital, Marquette, MI

This strep season, you'll find the fastest and easiest Group A Strep kit even better. With expanded convenience features to make its efficient protocol even easier. And with a liquid positive and negative control now included in every kit.

Get the test that delivers satisfaction coast to coast.

Order Directigen 1-2-3 Group A Strep from your Becton Dickinson Microbiology Systems distributor. Or, call 1-800-638-8663 for more information or the location of your nearest distributor.

Directigen 1-2-3 is a trademark of Becton Dickinson and Company.
